WordPress

React

NodeJS

PHP

MySQL

T-SQL

VS Code

Figma

AdobeXD

Photoshop

Illustrator

PostMan

Docker

AEM

JQuery

PROFESSIONAL EXPERIENCE

Application Developer

[OMES](#); Contract

October 2023 – Current

Reason for leaving: Project nearing completion.

In addition to the work I did in the role below, my role expanded to include: deployments, local testing, version upgrades, component/feature creation, and issue management with Adobe to resolve internal bugs we didn't have access to.

UX/UI Developer

[OMES](#); Contract

October 2023 – April 2024

Reason for leaving: Transitioned Roles.

Maintained AEM instance. Updated and maintained our custom components using JavaScript and CSS. Lead client projects. I handled: initial scope meetings, web author training, site creation, permissions, analytic board creation and training, web form creation, ongoing support, etc... Collaborated with our Web Designer on client site designs and component changes. Followed W3C accessibility guidelines on all projects, working with our QA team from the design to the finished product. Assisted state organizations with moving existing content to a more accessible state, in accordance with federal law. Trained web authors on accessible practices so future content will meet WCAG 2.2 Level AA standards. Solved client issues, tracked through our Service Now ticket system.

PHP Developer

[Hostek](#);

August 2022 – August 2023

Reason for leaving: Company downsizing.

Assisted with maintaining and altering existing systems for creating and managing client virtual private servers. Analyzed issues caused by PHP, C# and JavaScript application code. Proposed and implemented solutions to resolve application bugs and issues. Used Basecamp to track client issues; resolved those issues within our systems and negotiated satisfactory compromises when necessary. Created client reports and mailing lists using SQL. Also created custom WHMCS modules. Built our SalesManago module, which handled sending customer and transaction data to their external application and was built under strict and impromptu timelines. Maintained and updated all US & UK websites to ensure marketing strategies were in sync.

UX/UI Developer

[Teleflora](#); Contract

June 2021 – August 2022

Reason for leaving: Project completed successfully.

Implement website improvements based on performance issues found with Google performance tools, pagespeed insights & lighthouse. Average site score increases of 10 on both mobile and desktop versions with some sites seeing 40+. Implemented global scale style changes. Developed fully responsive themes for clients using designs built with Figma. Modified and fixed existing themes. Wrote JavaScript for the following: CSS animations; custom pop ups; and custom features. These features included integrations of Google maps, Instagram, and more into client themes. Also tested new features and identified and resolved bugs.

WordPress Developer

[Traction Marketing](#); Internship

Feb 2020 - May 2020

Reason for leaving: Internship completed successfully.

Create new pages and widgets in WordPress using PHP & JavaScript. Write and test code, build prototypes, solve issues, profile and analyze bottlenecks. Optimization of web applications for performance. Communicated effectively between teams (design team and development team). Handled getting publishing approvals from the design and development team. Researched, implemented, and updated plugins as necessary.
